

With our passion for Linux, we have been supporting exciting and innovative projects for well-known customers in the industrial environment every day for over 20 years. With us, you are always at the forefront of technology. Our employees are our success, so we value your personal contribution and always have an open ear for you. With us, you have a high degree of individual freedom and the opportunity for co-determination. Whether part-time, full-time or mobile office, we give you the freedom you need to balance your private and professional life and to realize your personal life model.

We continue to grow and are looking for you to join our team as

Security Vulnerability Analyst (m/f/d)

This is what waits for you at Linutronix:

As a Security Vulnerability Analyst, you will track and assess vulnerabilities in our industrial-grade Linux operating system and the open source components it relies on. You will develop, maintain and apply tooling for automated CVE monitoring, classification and reporting, leveraging existing open source solutions. Collaboration with both our engineering teams and customers is essential to support the assessment and mitigation of security risks in their products, as well as to assist them selecting additional open-source components. As strong believers in open source and an upstream-first philosophy, we look forward to your open source contributions - whether it's improving tooling or providing security fixes directly to upstream projects.

You fit in well with us if you can bring the following to the job:

- Proven experience in analyzing vulnerabilities, security management, or related fields
- Solid understanding of Linux systems and open source software ecosystems
- Ability to read and assess code for security impact across a variety of programming languages
- Previous open source contributions, especially in the security area - please include them in your application
- Familiarity with industrial automation, IEC62443, CRA or embedded systems (not mandatory)
- A systematic and reliable work habit to ensure continuous monitoring and consistent evaluation of CVEs
- Clear communication skills in English, German is a plus

This is what we offer you:

- A respectful working atmosphere with an open corporate culture and flat hierarchies
- Exciting projects and customers
- Innovative technologies
- Large scope for creativity and personal responsibility
- Flexible working hours, mobile or hybrid office and part-time options
- Company pension allowance and capital-forming benefits
- Annual training budget
